

Ceramic Heater Bands

Expandable

INSULATION CHAMBER

Design Features

- Energy efficient, less power consumption
- High sheath temperature capability up to 1600°F
- Thermally insulated
- Uniform temperature
- Flexible, easy to install and remove

Terminal box cover:

Heavy gauge rust resistant material has knockouts for 1/2" conduit connections.

Ceramic Fiber Insulation:

The standard insulation is 1/4" thick to improve energy conservation 25% and more over non-insulated bands. 1/2" thick insulation optional. In the Maxi-Insulated design, an additional 1/2" non-compressed layer of insulation is contained in a separate, flexible chamber for even greater energy savings.

Serrated Sheath:

Sheath material is resistant to heat and corrosion. Unique Serrations maximize flexibility, increase surface contact and provide easy opening and installation of the heater, eliminating the necessity of two piece band heaters up to 18" in diameter.

Simplified Installation,

Additional Energy Conservation:

Ceramic Band Heaters can be manufactured in widths much greater than what is practical in Mica Band Heaters, eliminating heat losses between gaps in narrow band heaters and simplifying installation

Mounting Flange is Standard:

Quick release latch is optional for ease of installation. Spring loaded screw on flange is available to compensate for thermal expansion and contraction (over 18" diameter)

Termination:

Located at gap or 180° from the gap.

Thermocouple:

Should be located through gap or through hole in overlap flange where possible. Ask about holes and cut-outs through sheath.

EXPANDABLE CERAMIC 1 1/2" HEATER BANDS

- 240 Volt
- 1 1/2 " Wide
- One size fits many
- Stainless sheath
- Terminal Boxes \$8.00 Each-- Add BX to part number

NOTE: ALL PRICES ARE IN CANADIAN DOLLARS!
