**FRONT LOAD SQUARE COIL HEATER  
INSTALLATION DATA**

Please read carefully before  
installing and/or removing heater.

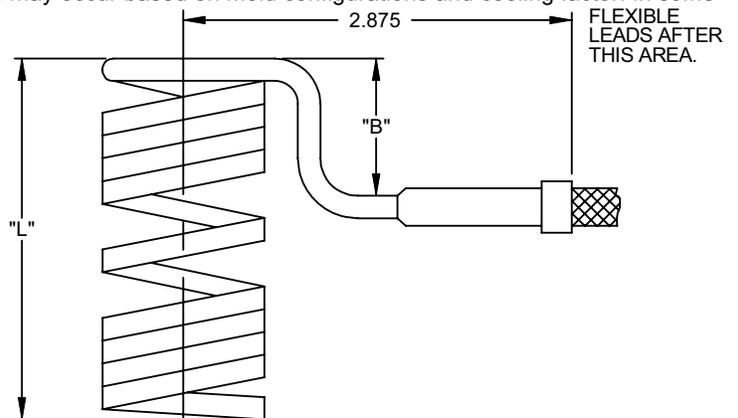

NOTE: Dimensions are in inches.

NOTE: The expansion factor must be taken into consideration prior to machining and installing nozzle. This factor (BE) must then be added to the nominal "A" dimension. Formula for determining this expansion factor is as follows:  
BE="A" dimension x 0.00000633 x (Nozzle set point temperature - 68°F).

EXAMPLE: Given a 2.5 inch "A" dimension, with a nozzle set point temperature of 500°F:  
BE = 2.5 x 0.00000633 x (500 - 68) = 0.0068 . . . thus "A" + BE will be 2.5068.

Please note that the above information is only given as an example. variations may occur based on mold configurations and cooling factor. In some instances, it may be necessary to obtain an empirical factor.

CATALOG NUMBER	SUB-ASSY. NUMBER	"B" DIM.	"L" DIM.	WATTAGE	NOZZLE REF. NO.

**FRONT LOAD SQUARE COIL HEATER**  
**INSTALLATION DATA**  
 Please read carefully before  
 installing and/or removing heater.

**RECOMMENDATIONS AND GUIDELINES**

1. Front Load Square Coil Heaters are designed to be used with Gate Mate 4 Nozzles only.
2. The nozzle head must be held in such a manner to keep it from rotating upon installation of the front load square coil heater. This may be done by making a key for the head to match the flat on the nozzle's head or by circle interpolation.
3. Nozzle plate must be designed so that the heads of the socket head cap screws are exposed when the mold is split on the parting line.
4. After the nozzle has been located and positioned in the nozzle plate with manifold secured in place and "A" plate removed. The heater can be installed on the nozzle body as follows:
  - a. Place heater within Tube "A" so that the bending exit lead lies within the slot of the tube.
  - b. Insert tube "B" with angle cut within Tube "A" so that the angle of the Tube mates with the last coil of the heater.
  - c. Rotate Tube "A" counterclockwise while at the same time rotating tube "B" clockwise. This action will spring open the coils enough to slide the heater onto the shaft of the nozzle body.
  - d. Slide the heater onto the nozzle body shaft aligning the heater exit lead within the relief slot in the nozzle's head.
  - e. Position heater so that the end of the last coil is above the relief of the seal-off area. (see figure above).
5. The power and thermocouple leads may be spliced in the wiring channel for ease of heater replacement.
 

\* Leads may be spliced using Thomas & Betts nylon insulated disconnects.  
 Male Cat. No. 18RA-251T  
 Female Cat. No. 18RA-2577
6. Secure wires in wire channel with straps before assembling "A" plate to mold.

**OPERATING PROCEDURE**

The nozzles are supplied with a Square (Flat) Coil Heater. It is recommended to use a D-M-E closed loop Temperature Controller for optimum Temperature Control. When starting the nozzle, set the temperature to 10% voltage if using in open loop manual type or to 200°F if using closed loop automatic type. In either case this procedure will allow the heater to dissipate any moisture. Make sure you maintain this start-up setting for 15 minutes. Controller equipped with Step Smart ®, Smart Step ® or other heater warm-up circuitry will change automatically. It is essential to use controllers with the proper voltage and wattage capabilities. The voltage and wattage of each heater is clearly marked on the heater tag.

Step Smart ®, Smart Start ® and DME ® are all registered trademarks of DME Company.

**WIRING INFORMATION**

Square Coil Heaters are supplied with 2" prestripped 36" long leads. Heaters are 240 VAC. (120 VAC heaters are available on request).  
 2 power leads are Multi Color.  
 1 ground lead is GREEN.  
 Thermocouple is "J" Type.  
 Thermocouple is supplied with 36" leads.  
 1 T/C lead is WHITE and negative (-) constantan (non-magnetic).  
 1 T/C lead is BLACK and positive (+) iron (magnetic).

**IMPORTANT SAFETY INFORMATION**

A hot-runner system includes electrical elements and may contain molten plastic at elevated temperature and pressure. To avoid injury, exercise caution by reading these instructions before servicing or operating the system.

These instructions must be passed on to the end user where they should be read before using this product. Failure to do so can result in serious injury or death.

Failure to comply will result in serious injury or death:

**ELECTRICAL HAZARDS**

Improper voltages or grounding can result in electrical shock. Use only with proper voltage and a proper earth ground.  
 To avoid electrical shock, do not operate product when wet.  
 Do not operate this equipment with covers or panels removed.  
 To avoid electrical shock, turn off main power disconnect and lockout / tag out before servicing this device. Do not connect temperature sensors to electrical power. It will damage the product and it can cause fire, severe injuries or even death.  
 If green ground wire present wire must be connected to the ground.  
 Do not rebend rigid leads. Rebending leads might result in damage to circuit.  
 Product might absorb moisture when cool. Use low Voltage or power to drive out residual moisture before applying full power. Failure to do so may cause damage to this product.

Failure to comply can result in serious injury or death:

**STORED ENERGY AND HIGH TEMPERATURE HAZARDS**

This product maintains molten plastic at high pressure. Use caution when operating and servicing the system.  
 Physical contact with molten plastic may result in severe burns. Proper protective equipment, including eye protection, must be worn. This product has heated surfaces. Use caution when operating and servicing the system to avoid severe burns. Proper protective equipment should be worn.
