Mount Connector Directly on Mold Or Mold Termination Box

Connectors on the MPTC-10 and -20 Cables are constructed of stranded wire for use in high temperature environments, and are available to connect the mainframe to the connector on the mold. Available in lengths of 10 or 20 feet. Integral retaining latches on the male and female connectors provide secure cable connections. Connector configurations ensure proper insertion of cable.

Armored Mold Power-Thermocouple Cables

Single Zone Mold Power-Thermocouple Cables are constructed of stranded wire for use in high temperature environments, and are available to connect the mainframe to the connector on the mold. Available in lengths of 10 or 20 feet. Integral retaining latches on the male and female connectors provide secure cable connections. Connector configurations ensure proper insertion of cable.

Typical DME Components

For 1 heater zone under 10 amps at 240vac.
