

# FF7PLUS GATE CUTTERS

**Just when we thought it could not get any better!**

DME has redefined the industry standard for gate cutter performance by developing the FF7PLUS gate cutter. The FF7PLUS cutting-edge design uses forged, high carbon steel blades which are ground and polished to achieve keen blade edges. The result is a smooth clean cross section cut requiring less hand pressure. High performance coil springs are incorporated to allow easy continuous cutting motions. FF7PLUS is ideal for repetitive cutting, large heavy sprues, and particularly tough applications, such as glass-filled or engineered resins. The improved design makes the FF7PLUS the preferred cutter, and new leader for exceptional gate cutter performance.

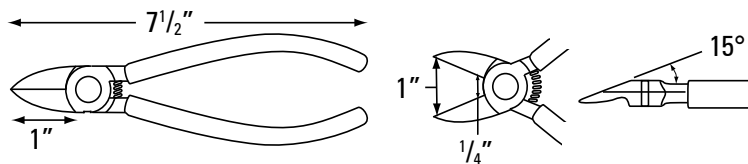

Stainless steel spring for long spring life

High carbon steel blades ground & polished

Low profile

Flat Face for flush cutting
