

LIFETIME Roller Locks

PREMIUM LOCKS
FOR THE LIFETIME OF YOUR MOLD

PARTING LINE ALIGNMENT

Improper mold alignment can cause dimensional problems, flash, damaged components, or even a mold that won't run anymore.

Initial Engagement

Interlocks must be able to allow for interference/angled engagement as the movable platen tends to lean forward and sag out of alignment due to mold weight and the toggle function. Also the cavity/core alignment is influenced by the quality/condition and location of guide pins and bushings, if these components are worn or out of place the alignment of the movable and stationary halves will be off.

DME LifeTime Side Locks

Five degree =
0.0000" interference fit

Standard Side Locks

One Tenth Degree =
.00022" interference fit

Two degree =
.0072" interference fit

Initial Engagement

Interlocks must be able to allow for interference/angled engagement as the movable platen tends to lean forward and sag out of alignment due to mold weight and the toggle function. Also the cavity/core alignment is influenced by the quality/condition and location of guide pins and bushings, if these components are worn or out of place the alignment of the movable and stationary halves will be off. These components provide the primary alignment of the mold halves.

Early Alignment for Precision Shutoffs

Interlocks align mold halves to protect precision tapered shut off inserts from being damaged. This is especially true with cross over telescoping cavity and core inserts.

Final Lockup Holding Strength

Interlocks provide constraints to counter the pressure produced during injection ensuring the A and B plate do not shift which results in a constant molded part thickness and matched parting lines.

LifeLocks 3"
Penta-Lock Design

LifeLocks 1-2"
Triple Lock Design

THE BIG 3 REASONS FOR LIFETIME LOCK SUCCESS

1. Carbide Rollers Can Reduce Or Eliminate Galling During Initial Engagement

Movable platen tends to lean forward and sag out of alignment because of mold weight and the toggle function

2. Early Alignment for Precision Shutoffs

Interlock aligns mold halves to protect precision tapered shut off inserts from being damaged. This is especially true with cross over telescoping inserts from one half to the other half

3. Triple & Penta-Locking Configurations (Patented)

Constrains counter-pressure of the injection to ensure constant molded part thickness and matched parting lines, resulting in the most precise location and holding power on final lock-up in the industry.

Patent No. US 6,981,858 B2

Patent No. US 6,558,145 B2

3 Base Materials To Fit Your Application

Our standard lock made of D2 **outperforms the competition in 3 ways**, Longer lead for early engagement and protect for cross over shut off, carbide rollers reduce friction and ease early engagement when the mold halves come together, the triple locking design provides more bearing surface when the locks are fully engaged.

Our DC53 locks have all the same great features as standard locks with the added benefit to **withstand the demands of running high temperatures (700°F) required for molding engineered resins**. Competitor locks will anneal and prematurely wear due to the higher heat. DME's DC53 lock will withstand this type off application with long life performance.

Our 440C stainless-steel locks have the same long lasting performance design features as our standard lock and have been developed to meet the requirements of clean room and packaging applications.

PERFORMANCE TESTED

Lab Testing

- Millions of Cycles
- Virtually No Wear
- Grease on rollers were still evident after 200,000 cycles

Field Production Testing

- Minimal wear after a million cycles or 14 months of fast cycle production
- No locks have seized or fractured
- Locks did not need position rotation

Benefits of DME's Patented Roller Lock

Precision Alignment Combing the Technology of:

- Straight
- Tapered
- Carbide Roller Bearing
- Made in 3 materials to fit your application needs.

Advantages

- Non-binding low friction alignment
- 30% earlier aligned engagement
- Final taper lock up strength
- Full Interchangeability male and female
- Retrofittable to industry standard foot-print, no additional machining required

ALIGN YOUR PRIORITIES

WITH THE LIFETIME LOCK ADVANTAGE

3-POINT COMPARISON

1

DME Carbide Rollers glide into position vs. conventional lock surfaces

2

Elongated male section allows earlier engagement and more forgiving entrance angles.

3

Two additional locking features insure precise alignment versus a competitors single lock design.

PRODUCT SPECIFICATIONS

DME LIFETIME LOCKS: PENTA-LOCK CONFIGURATION

3 INCH LOCKS

Penta-Lock Is Ideal For Molds With Increased Closing Force & Higher Injection Pressures To Ensure A Precision Lock Up At Final Close.

Extended Long Engagement To Protect Cross Over Shutoff

Carbide Rollers To Help Align Mold Haves

Interlacing Locking Condition

Item Number			STEEL TYPE	Dimensions given in inches.								SHCS SIZE

With tens of thousands of products to choose from, DME is your one-stop shop for everything molding. From complex undercuts solutions and plate control to standard pins, bushings and interlocks, the DME line of mold components will help you build or rebuild your mold base inside out, top to bottom. Industrial Supplies, Mold Bases, MUD Quick-Change, Control Systems, and Hot Runner solutions round out our extensive offering to truly be your one-stop shop.
